Ketastelt taastatud JUKU tarkvara üldnimekiri

Kataloog väljendab ketastelt taastatud JUKU E5101-E5104 tarkvara 2024 sügise seisuga. Tarkvara lisandub ning kirjeldused võivad teadmiste täienedes muutuda. Nimekirja autoriteetne kontrollsummadega versioon on:

- https://github.com/infoaed/juku3000/blob/master/docs/tarkvara-kataloog.txt

Samast on leitavad ka kontrollsummadeta teisendused PDFi ja Markdowni. Enamik materjalist on allalaaditav aadressil:

• https://elektroonikamuuseum.ee/failid/juku/tarkvara/

Kasutajasektsioonid on nummerdatud alates esimesest, kustutatud failid on sektsioonis E5. Osaliselt taastatud ketaste puhul märgib 0/0 vigaste sektorite hulka ketta kummalgi poolel, nt 0/32 märgib 32 vigast sektorit ketta teisel poolel.

JUKUSYS

Eri ketastelt leitud opsüsteemid, mida JUKU suudab alglaadida.

SIZE: 25K (25142) / SHA1: 86df07916a834cc71d38a2885f439e5ceba42c25

MAALT01

Kettad MAALTnn seeriast on koos MUSEUMnn seeriaga JUKPROGn ja JUKGAME1 aluseks. Kettad loeti esmalt sisse DOSi ImageDisk utiliidiga ja seejärel uuesti KryoFluxiga. Siin äratoodutest on enamik ImageDiski satsist, va kettad 12, 15, 20 ja 23, mille ImageDisk algselt luges välja puudulikult. Kui ketastelt on vaja kätte saada midagi väga olulist, siis on võimalik kahte satsi omavahel kombineerida, kuid ketaste algseid magnetvoogude salvestisi säilinud pole ja osade ketaste seisukord lugemise tulemusel märgatavalt halvenes, sj juba teise lugemisega. Kettad 14 ja 17 olid tühjad ja ketas 19 oli loetamatu.
